

Change 5star to finding people of passions for things that they might like or find people to work with to change problems and do projects with one another.

I want a program that will check if the person's amount of "5\$star" is equal to another person's amount of "5\$star" that the person wants to work with or find? If the amount of "5\$star" is below 3 "5\$star" then send them an error code and let them try to search again. If the amount of "5\$star" is equal to 3 or more then send a message on the screen that says you got a match.

1. Ask the user for your "5\$star"
2. store/save the amount of "5\$star" they added
3. Ask the person to press find button
4. If the algorithm finds a match of 3 "5\$stars" or more
5. Tell the person that they found a match and what the "5\$stars" were
6. If they didn't find a match with there "5\$stars" tell them to press find again

credit of the amount of money that they added is equal to the item they want to buy? If the credit that they added is negative or below the amount of money send and error code and let them try again. If the money is the right amount send a message on the screen saying they got it right.

1. Ask the user how much credit they want to enter

Change 5star to finding people of patission for things that they might like or find people to work with to change problems and do
